

How Sob'r-K HangoverStopper Works - Sob'r-K works much like a filter, filtering out impurities (congeners) and toxins as they are passing through the stomach and intestinal track. Sob'r-K fills the millions of small villi in the stomach and small intestine Sob'r-K then collects the impurities and toxins in the pores of the carbon molecular and then passes it through the system.

The FDA has not evaluated these statements and this product. This product is not intended to diagnose, treat, cure or prevent any disease.

US Patent #4,594,249, New Patent Pending

MONEY BACK GUARANTEE

Sob'r-K has NO additives or preservatives and is also an all natural *alternative for:

- ☞ *"Excellent ... no headache and no nausea" - New York Post*
- ☞ *"Wondrous" - London Times*
- ☞ *"Our favorite" - POV Magazine*

What is Sob'r-K? Sob'r-K is a pill made from a patented all natural type of activated carbon. Sob'r-K is the highest quality vegetable carbon made. Sob'r-K is completely manufactured and packaged in the USA. **How long has Sob'r-K been on the market?** Sob'r-K (formerly Alcosorb) was invented in 1986. We spent 10 years testing Sob'r-K. Sob'r-K went on the market June 1996.

Can I get the same effects from another type of Activated carbon? NO. The types of carbons are countless. Our patented carbon with its specific particle and pore size is proven to be most effective for the adverse effects of alcohol.

How does Sob'r-K work? Somewhat like a water filter. You take two pills prior to drinking and then two pills after each two drinks. Sob'r-K is absorbed into your lower stomach and small intestines and as the alcohol works its way through your body, Sob'r-K acts as a filter taking out all the impurities. We found it is not the alcohol that causes all the adverse side effects but the impurities (congeners) found in the alcohol.

Are there any problems with taking more than the recommended dosage? You can take as many Sob'r-K HangoverStopper as you want. Our product is all natural with no additives. Our dosage of 6 pills is based on the average person drinking 5 to 6 drinks in a 3 to 4 hour session. If you are drinking more than this you should take more. Many people take 12 to 15 pills a day as a daily Detoxifier. Also, our pills work great stomach acid, heartburn, daily detoxification and intestinal disorders.

How will I feel the next day? You will feel great. As you sleep Sob'r-K will clean out your system of all those impurities that cause hangovers.

What if I forget to take Sob'r-K while I am drinking? No problem. For the very best results you should take Sob'r-K while you drink but if you forget you can take it after or even the next morning. What causes the hangover is the toxins or congeners and you won't feel better until these toxins are out of your system and Sob'r-K will remove these toxins quicker.

Won't coffee do the same? NO, the caffeine in coffee is a stimulant and will only keep you from getting a good night sleep.

Can't I just take aspirins or non-aspirin pain relievers? You should never mix acetaminophen (commonly found in most pain relievers) and alcohol. The mixture of alcohol and acetaminophen can greatly increase the damage to your liver.

What if I'm unhappy with Sob'r-K? Mail us the empty package and **we will refund your money.** NO other hangover cure will make that offer.

How much should I take? Take two pills prior to drinking alcohol (*for best results take the two pills one-hour before drinking*), two pills during and two pills after you are done drinking. If you drink more than five drinks, you may need to take more. You can take as

much Sob'r-K as you want. Sob'r-K can not hurt you. The more you take the better you will feel.

Does Sob'r-K work on Red Wines? In some red wines the congeners (congeners in liquor is what causes hangovers) attaches the red pigmentation which in some cases will be too large for the Sob'r-K molecule to attach to. Basically, if you are drinking red wines to be on the safe side you may want to take 2 or 3 more pills than normal.

Why should I sell Sob'r-K? Besides making money, your customers will wake up the next day remembering what a great time they had at your establishment. We found that if customers take Sob'r-K when they go out on Friday Night, they are more willing to return on Saturday night.

How is Sob'r-K sold? Sob'r-K is sold in six pill foil packages. Sob'r-K comes in a 40 pack pop up counter display box. Sob'r-K has a hole in the top of the package for I-hook display. Sob'r-K is designed to work in most vending machines. Sob'r-K also comes in a 60 count bottle

Is Sob'r-K FDA approved? NO, because it is NOT a drug. Sob'r-K is an all natural food supplement. We make no claims except for what is on our patent.

What are the side effects of Sob'r-K? NONE, as stated in the book, Activated Charcoal in Medical Applications, Pg. 166, "**Activated Charcoal is harmless.**"

Will Sob'r-K reduce my blood alcohol level? NO. We make no claims except as a hangover remedy. Alcohol is a complex drug. Much on how alcohol effects the brain is still theory.

If I take Sob'r-K will I still get the "high feeling" from drinking? You will still feel the intoxicating effects.

Who has endorsed Sob'r-K? Dr. Schaefer, (featured in "Omni Mag.;" seen on the "Today Show"; called the "Indiana Jones of Taverns"; and the world's leading expert on alcohol use), states, "**Sob'r-K really works, its the only hangover pill that has my approval.**" We also have other endorsements from the London Times, POV Magazine, and Howthingswork.com.
